

# Cementitious finishing

1. Floor slab or existing finishing
2. Underlay Isolmant IsolTile
3. Fascia Perimetrale Isolmant (Tecnica Doppio Spessore o Tecnica Reticolata)
4. Cementitious finishing

## Description

Cementitious finishing (such as Terrazzo) is normally laid onto screed, but it may fail because of bonding with the screed. A floating system with an Isolmant IsolTile resilient layer can absorb most of the sub-floor imperfections and minor cracks, so that they are not telegraphed to the finishing. Isolmant IsolTile acts as flexible membrane, preserving the finishing and significantly improving impact sound insulation.
