

Step and landings insulation

1. Bearing structure
2. Cementitious adhesive
3. Isolmant Kit Scale
4. Mortar bed or cementitious adhesive
5. Marble finishing
6. Fascia Perimetrale Kit Scale

Description

A good impact sound protection on the stairways is very important in multi-occupier buildings or hotels. To avoid annoyance caused by walking on stairs, if the structure and the construction method cannot be changes, a useful solution is to apply additional damping or elastic layer like Isolmant Isoltile on the top of the stairs. This solution is easy to install, by glueing the resilient material on the structure and the finishing marble on the resilient mat.
