

Glued flooring

1. Floor slab
2. Isolmant flanking strip
3. Levelling layer
4. Screed
5. Underlay IsolDrum (Parquet or PU adesivo)
6. IsolDrum Parquet flanking strip
7. Glued ceramic tiles or wooden floor

Description

IsolDrum Parquet can be used to improve impact sound insulation under ceramic flooring or glued parquet. This solution is particularly suited for refurbishment and restoration of ancient buildings with no acoustic insulation: the existing flooring is replaced or simply covered with Isoltile and the new finishing. IsolDrum Parquet mats can be also dry lied on the existing floor to obtain a "semi-floating" solution, when feasibility is requested.
